SFJ LIVE ENCODER

SOFTWARE DRIVEN

Software defined architecture is the driving force behind our unique live encoder. With its ultra-high density performance, churches can harness the power of innovation of the next generation of multiscreen live video encoding

REACH YOUR AUDIENCE LOUD & CLEAR

Your unique content can be delivered using Adobe RTMP and HDS. Apple HLS or Microsofts Smooth Streaming, Mpeg-Dash, and transport streams (TS). Even when you are in a low bandwidth environment, you can use the built in Buffer

CREATIVE DEPLOYMENT

We understand each church has their own way of live streaming. We developed our encoder to be operated with the most flexibility. Use can use our drop dead easy GUI, JSON driven API or our cloud sync utility

REPORTING & ANALYTICS

Get rapid insights into the status of each of your live encoding jobs

WHY SFJ LIVE ENCODER

The massive growth of multi screen live video is adding significant complexity to legacy encoders. Plus with new standards like 4K old encoders are not able to deliver. A new solution is needed

SFJ Live Encoder supports next generation codec technologies today like HEVC/UHD for 4K delivery, and is ready for the ever changing new protocols such as mPEG-Dash. Since we are software driven, future software updates will bring you up to date with new standards when released

HOW YOU BENEFIT

- ✓ Produce multiple outputs at different resolutions and different bit rates, encapsulated for all your delivery formats
- ✓ With real time controls, you are able to control archiving of each output, view detailed reporting while maintaining control
- ✓ Utilize The Buffer when you have less than perfect bandwidth during your event. Be empowered to deliver high quality always
- ✓ Highly flexible and cost-efficient way to give today's churches the innovative live encoding multi screen services they demand
